

Venturi Wireless Data Optimization: Enabling True Mobility for the Enterprise

Venturi optimizes wireless data to enable greater productivity for your mobile workforce.

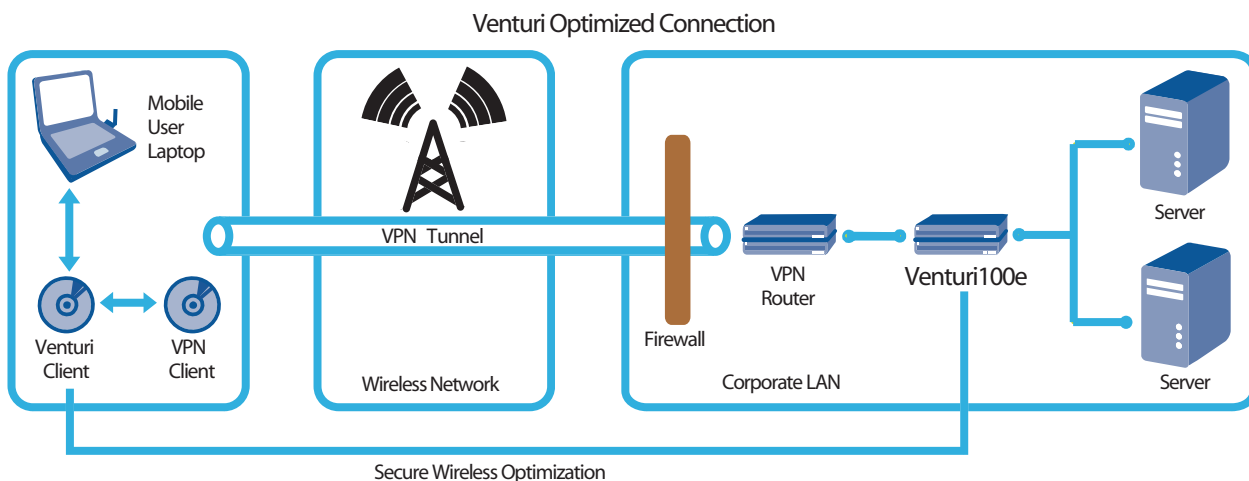

Venturi optimization is designed specifically for enterprises and their mobile employees. Key enterprise applications are crucial to everyday business operations; however, most applications are not designed for wireless network transport and contribute to slow mobile access.

Venturi optimization, used in conjunction with wireless wide-area networks (wi-WANs), offers the total freedom of wireless mobility. Mobile employees using Venturi can conduct business from the road quickly and confidently -- downloading attachments, spreadsheets, and presentations to their laptops and wireless-enabled devices over a wi-WAN at high-performance speeds.

Venturi optimization solutions interoperate seamlessly with secure enterprise networks.

Venturi overcomes remote access limitations by optimizing enterprise applications for fast and efficient delivery over wi-WANs. As shown in the diagram below, Venturi is deployed alongside standard VPN architecture for end-to-end network security.

Venturi provides optimized data throughput for Web, FTP, Internet e-mail and Microsoft Exchange/Outlook applications. For users with Microsoft Outlook 2000 and XP, Venturi offers its Outlook Agent, which simulates MS Outlook 2003 Cached Exchange Mode.

Venturi offers a better wireless experience for your mobile employees.

Venturi optimization used with wi-WANs offers a compelling wireless Internet and intranet experience for your mobile employees. With Venturi, your employees gain:

Performance.

Venturi gives mobile employees LAN-like wireless access to familiar business content and enterprise applications, such as:

- Microsoft Exchange and Outlook
- E-mail (SMTP, POP3, IMAP4)
- Web and Secure Web (HTTP, HTTPS)
- All Images (GIF, JPEG, PNG, etc.)
- Microsoft Office
- Web Applications (JavaScript, CGI)

Reliability.

Venturi provides experience-enhancing features that allow mobile employees to enjoy a seamless, secure, and more reliable wireless Internet/intranet session without losing valuable time or information. Venturi provides:

- **Session Persistence.** Keeps applications alive longer during a user's session when networks hand off, links are interrupted in fringe areas, or when connections drop and reconnect.
- **Enhanced Airlink Usability.** Improves application usage of the airlink bandwidth to improve session connectivity, especially in difficult RF coverage conditions, such as inside buildings and at the far edge of cell-sites where non-optimized links may degrade dramatically.

And... Venturi is quick to implement, easy to manage, and simple to use.

Venturi provides simple network management for administrators, while offering an intuitive and responsive experience for end-users. Venturi delivers:

Simplicity.

Venturi solutions are quick and easy to deploy and offer:

- Seamless interoperability with leading VPNs, including Cisco, Nortel, Checkpoint and NetScreen, ensuring end-to-end network security
- An intuitive and responsive user interface
- A plug-and-play network appliance requiring a three- step, 15-minute initial site installation
- 100% Web-based network management
